

## BaySpace Privacy Notice and User Agreement

Effective Date: May 21, 2026

Version: 1.4 Draft

Privacy Contact: bayoracle@protonmail.com

Operator: Bay Oracle

Platform: BaySpace

BaySpace is a members-based social media, profile, posting, and archive platform developed by Bay Oracle. BaySpace allows users to create member accounts, enter a member-access area, read content, create public profiles, save posts, mark favorite authors, vote on Daily Food posts, and, depending on account type, submit user-generated material into designated sections including Daily Food, Theories, Library, and any other sections BaySpace makes available.

This Privacy Notice and User Agreement explains what information BaySpace collects, how that information is used, what may be visible to other users or the public, how anonymous, incognito, and pen-name display features work, what controls users may have, and what limitations apply to privacy, account recovery, deletion, moderation, public profiles, saved posts, ticket votes, and future platform features.

BaySpace is designed to avoid unnecessary identity collection. BaySpace does not require ordinary users to provide a real legal name, phone number, or email address to participate unless a future feature specifically requires it. However, BaySpace must still collect and store certain information in order to operate accounts, preserve posts, manage sessions, enforce posting permissions, display profiles, moderate content, secure the platform, and maintain reliability.

By creating an account, logging in, submitting content, saving posts, voting, visiting profiles, using member-only areas, or otherwise using BaySpace, you agree to this Privacy Notice and User Agreement.

### 1. Information BaySpace Collects

BaySpace collects information that is necessary to operate the platform and information that users voluntarily provide.

#### 1.1 Account Information

When a user creates or maintains an account, BaySpace may collect and store:

- username, reference name, account name, or display name;
- member number;
- account type, role, title, or posting permissions;
- public profile information voluntarily provided by the user;
- email address, if voluntarily provided;
- birthday month and birthday year, if voluntarily provided;

- public links voluntarily provided by the user, including links to X, LinkedIn, GitHub, YouTube, or similar services;
- whether a public link should be displayed on the user's profile;
- account creation date;
- account update timestamps;
- account status;
- user agreement acceptance timestamp and agreement version;
- account roles, access gates, or permissions.

BaySpace account types may include, among others:

- Curious Reader;
- Author - Daily Food;
- Author - Theories;
- Influencer - Daily Food;
- Influencer - Theories;
- BAYO CLUB.

Account type affects platform permissions, including whether a user may post, where a user may post, whether anonymous or incognito display options are available, and whether access codes or gate keys are required.

## 1.2 Authentication, Signup, and Session Information

BaySpace may collect information necessary to authenticate users, complete signup, and maintain sessions, including:

- member number or login identifier;
- PIN authentication data in protected hashed form;
- PIN salt or similar security material;
- signup draft information during account creation;
- session tokens in protected hashed form;
- session creation time;
- session expiration time;
- logout or revocation status;
- access-code or gate-key validation state, if applicable.

BaySpace should not store plaintext PINs. Authentication credentials should be protected server-side. Users are responsible for remembering their member number and PIN. Because BaySpace may allow signup without email, account recovery may be limited or unavailable if credentials are lost.

## 1.3 User Content

BaySpace stores content submitted by users. This may include:

- posts;
- Daily Food submissions;
- Theories submissions;
- Library submissions;
- Top News or other section submissions if enabled;
- post titles;
- post body text;
- links and sources;
- tags, categories, or metadata;
- shelf labels;
- shelf codes;
- anonymous or incognito display settings;
- author/member references;
- timestamps;
- saved-post records;
- ticket vote counts;
- moderation status and moderation records.

User content is central to BaySpace. Users should not submit information they wish to keep private unless BaySpace clearly provides a private feature for that specific purpose.

#### 1.4 Public Profile Information

BaySpace may provide public or member-visible profile pages. A profile may display:

- member number;
- name or username;
- reference name;
- title;
- BAYO CLUB or other role indicators;
- public links the user has chosen to display;
- visible non-anonymous, non-incognito posts by that member;
- profile visit counts;
- saved/favorite counts associated with visible posts;
- ticket vote counts associated with visible posts.

Users should assume public profile information may be visible to anyone who can access the profile page.

#### 1.5 Saved Posts, Favorite Authors, and Ticket Votes

BaySpace may allow users to save posts, view saved-post counts, favorite authors, and vote on Daily Food posts or similar platform items.

BaySpace may store saved-post records server-side. Favorite-author preferences may be stored locally in the user's browser. Ticket vote counts may be stored with post metadata, and ticket

vote cooldown information may be stored server-side for logged-in users and locally in the browser for interface convenience.

These features may reveal aggregate activity, such as how many times a post has been saved or voted on. BaySpace may use these records to operate counters, prevent abuse, enforce cooldown periods, rank or organize content, or support future platform features.

## 1.6 Technical and Security Information

BaySpace may collect technical information necessary to operate and protect the platform, including:

- IP address;
- browser type;
- device information;
- operating system information;
- request timestamps;
- server logs;
- error logs;
- authentication logs;
- abuse-prevention records;
- security events;
- moderation-related events.

This information may be used to protect BaySpace against spam, abuse, unauthorized access, technical failure, and misuse of platform features.

## 2. How BaySpace Uses Information

BaySpace uses collected information to operate the platform and preserve the integrity of the shared member environment.

BaySpace may use information to:

- create accounts;
- assign and preserve member numbers;
- authenticate users;
- maintain secure login sessions;
- complete signup flows;
- record agreement acceptance;
- display user profiles and posts;
- display public profile links selected by users;
- count profile visits;
- enforce account-type permissions;
- determine whether a user may post in a given section;
- determine whether a user may use anonymous or incognito display options;

- store and retrieve posts;
- organize content by section, category, shelf, tag, code, or source;
- operate Daily Food, Theories, Library, Top News, and other areas;
- operate saved posts and favorite-related features;
- operate ticket votes, cooldowns, and vote counters;
- process reports if reporting tools are available;
- review and moderate content;
- prevent spam, fraud, abuse, impersonation, and unauthorized access;
- diagnose technical problems;
- preserve platform reliability;
- maintain security logs;
- comply with legal obligations;
- enforce BaySpace rules, terms, and policies.

### 3. Public, Member-Visible, and Platform-Visible Information

BaySpace is a social and archival platform. Certain information may be visible to other users or the public.

Depending on account type, post settings, section rules, profile settings, and platform design, visible information may include:

- username or reference name;
- member number;
- display title;
- account type or author type;
- profile fields voluntarily displayed by the user;
- public links voluntarily displayed by the user;
- posts;
- links and sources submitted by the user;
- shelf labels or shelf codes;
- post timestamps;
- public author identity;
- anonymous, incognito, or pen-name display identity;
- ticket vote counts;
- saved-post or favorite counts in aggregate;
- profile visit counts;
- visible moderation status, if applicable.

Users should assume that anything posted to BaySpace may be seen by other users or the public if that area of the platform is public or member-visible.

Do not post private personal information, confidential information, sensitive identity details, passwords, financial information, medical information, private addresses, or anything you do not want other users, the public, platform administrators, hosting providers, or legal processes to see.

#### 4. Account Types, Access Gates, and Posting Permissions

BaySpace uses account types and roles to determine posting permissions.

Curious Reader accounts may read and reveal available content but may not post.

Author - Daily Food accounts may post in Daily Food and may be allowed to use anonymous or incognito display options.

Author - Theories accounts may post in Theories and may be allowed to use anonymous or incognito display options.

Influencer - Daily Food accounts may post in Daily Food and Library, subject to access requirements, platform rules, and moderation. Anonymous and incognito options may be unavailable for this role.

Influencer - Theories accounts may post in Theories and Library, subject to access requirements, platform rules, and moderation. Anonymous and incognito options may be unavailable for this role.

BAYO CLUB accounts may have broader posting access to Daily Food, Theories, and Library and may be allowed to use anonymous or incognito display options.

BaySpace may require prescreen passwords, creator codes, gate keys, or other access checks for certain account types. BaySpace may modify permissions, restrict posting, suspend accounts, remove roles, require approval, or change available account types at any time.

#### 5. Platform Sections

BaySpace organizes content into sections. Current or future sections may include:

Daily Food. Daily Food may contain posts, sources, tags, categories, ticket votes, and related metadata.

Theories. Theories may contain user theories, analysis, sources, and related metadata. Theories may be speculative. Users should distinguish theory from fact.

Library. Library may contain submissions, source material, shelf labels, shelf codes, references, and archive-style posts. Library content may support search, indexing, tags, references, codes, or future AI-assisted retrieval features.

Top News. Top News or news-related areas may contain posts, headlines, links, source material, or other content if BaySpace enables that section. Posting access may be restricted.

BaySpace may add, rename, remove, reorganize, or restrict sections as the platform develops.

## 6. Anonymous, Incognito, Ghost, and Pen-Name Limitations

BaySpace may allow anonymous, incognito, ghost author, or pen-name posting features.

These features are display features. They may affect how a post appears to other users or on public profile pages. They do not guarantee absolute anonymity.

BaySpace may still retain internal technical records necessary to:

- operate the account;
- connect content to the posting account internally;
- enforce platform rules;
- investigate abuse;
- prevent impersonation;
- protect users;
- comply with legal obligations;
- maintain platform security;
- moderate content.

Anonymous, incognito, ghost, or pen-name use should not be treated as a guarantee that BaySpace administrators, technical systems, hosting providers, database providers, logs, backups, or legal processes can never associate an account with content.

Changing a post's anonymous status or using an incognito shelf label changes public display only. It may not erase prior records, cached displays, logs, moderation records, or internal associations.

## 7. Cookies, Sessions, and Browser Storage

BaySpace may use cookies, session mechanisms, and limited browser storage to operate the platform.

Cookies and sessions may be used to:

- keep users logged in;
- authenticate requests;
- protect accounts;
- prevent unauthorized access;
- preserve signup drafts during account creation;
- maintain platform security.

Session cookies used for authentication should be protected through appropriate technical controls, such as HttpOnly, SameSite, and Secure settings where applicable.

BaySpace may use browser local storage for interface preferences, temporary convenience features, and non-authoritative state, including:

- active member display state;
- open post drafts;
- favorite author lists;
- ticket vote cooldown display state;
- post-store update signals;
- cached UI state.

Browser local storage is not guaranteed to be secure or permanent. Clearing browser storage, switching devices, using private browsing, or changing browsers may remove local preferences or drafts.

BaySpace should not use browser local storage as the authoritative source for login authority, account permissions, server-side posts, server-side saved posts, moderation state, or account ownership.

## 8. Infrastructure and Service Providers

BaySpace may use third-party infrastructure providers to host, store, secure, deploy, and operate the platform. These providers may process information as necessary to provide technical services to BaySpace.

Infrastructure may include:

- web hosting services;
- database services;
- serverless deployment services;
- logging and reliability systems;
- security systems;
- storage systems;
- analytics or abuse-prevention systems if later added.

BaySpace may use services such as Supabase/Postgres for persistent platform records and Vercel or similar providers for hosting and deployment. Infrastructure choices may change as the platform develops.

BaySpace does not sell user personal information as part of its basic platform operation.

## 9. Third-Party Links and Tools

BaySpace may display links submitted by users, links to external profiles, source links, and links to third-party tools or services. Users may choose to open external links, including public profile links, source links, or external assistant tools.

BaySpace is not responsible for third-party websites, tools, services, privacy practices, terms, content, security, or accuracy. Use of third-party services may be governed by those third parties' terms and privacy policies.

Users should not submit sensitive information to third-party services through BaySpace unless they understand and accept the third party's practices.

## 10. Moderation, Reports, and Enforcement

BaySpace may review, restrict, hide, remove, preserve, or report content when necessary to operate and protect the platform.

BaySpace may process reports and moderation records involving:

- user posts;
- accounts;
- profile information;
- links;
- comments, if enabled;
- spam;
- abuse;
- threats;
- harassment;
- impersonation;
- illegal content;
- security incidents;
- platform misuse.

BaySpace may take enforcement action, including:

- removing posts;
- hiding posts;
- flagging posts;
- restricting accounts;
- suspending accounts;
- banning accounts;
- changing roles or permissions;
- preserving records related to abuse or security;
- reporting content where legally required or appropriate.

BaySpace is not obligated to review all content before it appears. Moderation may be reactive, selective, automated, manual, or a combination of these approaches.

## 11. User Content Responsibility

Users are responsible for the content they submit, the links they share, and the profile information they display.

Users agree not to use BaySpace to:

- impersonate another person or entity;
- post unlawful, threatening, abusive, harassing, defamatory, or invasive content;
- post another person's private information without permission;
- post malware, phishing links, spam, or deceptive material;
- interfere with platform security or access controls;
- abuse voting, saved-post, profile, or posting features;
- attempt to access accounts, systems, or areas without authorization;
- use BaySpace in a way that violates applicable law.

BaySpace may remove content or restrict accounts that violate this agreement or harm the platform.

## 12. Accuracy of User Content

BaySpace hosts user-generated content.

Unless BaySpace expressly states otherwise, BaySpace does not verify, endorse, guarantee, or adopt user posts as accurate, complete, current, lawful, or reliable.

This applies to all sections, including Daily Food, Theories, Library, Top News, profiles, links, and source submissions.

Users are responsible for what they post. Users should independently verify important information before relying on it.

## 13. Library Content and Future AI Search

BaySpace may later include AI-assisted search, retrieval, summarization, indexing, recommendation, or research features, especially in connection with Library content.

If introduced, such features may involve:

- Library submissions;
- post titles;
- post body text;
- shelf labels;
- shelf codes;
- tags;
- references;
- metadata;
- search queries;

- retrieval logs.

BaySpace will update this Privacy Notice and User Agreement or provide a separate notice before implementing AI features that materially change how user content is indexed, searched, summarized, recommended, or processed.

AI-generated results, if later introduced, may be incomplete, inaccurate, or misleading. Users should verify original sources and should not treat AI output as professional advice.

#### 14. No Professional Advice

BaySpace is a social media, profile, posting, and archive platform.

BaySpace does not provide:

- medical advice;
- mental-health treatment;
- psychological counseling;
- legal advice;
- financial advice;
- emergency services;
- crisis intervention;
- professional diagnosis;
- professional verification of user claims.

User posts may discuss serious topics, but BaySpace does not transform user-generated content into professional advice.

If a user needs emergency help, legal advice, medical assistance, mental-health care, or professional guidance, they should contact qualified professionals or emergency services.

#### 15. Data Retention

BaySpace retains information for as long as reasonably necessary to operate the platform and fulfill the purposes described in this Privacy Notice and User Agreement.

BaySpace may retain information to:

- maintain accounts;
- preserve posts;
- display content;
- operate public profiles;
- operate saved posts;
- operate ticket votes and cooldowns;
- process reports;
- maintain moderation records;

- enforce platform rules;
- investigate abuse;
- secure the platform;
- comply with legal obligations;
- resolve disputes;
- maintain backups and logs.

Deleted content may remain for a limited time in backups, logs, cache layers, moderation records, security records, analytics records if later added, or legal-preservation systems.

BaySpace may retain certain records even after account deletion where necessary for security, legal compliance, abuse prevention, moderation, or legitimate platform operations.

## 16. Post Deletion, Account Wipe, and Account Deletion

BaySpace may allow users to delete individual posts, wipe account content, or delete accounts, depending on available platform features.

Post deletion may remove a post from ordinary display but may not immediately remove all related records from backups, logs, caches, moderation history, security systems, saved-post records, counters, or legal-preservation records.

An account wipe may remove or hide posts associated with an account while leaving the member account active.

Account deletion may retire the member number, mark the account deleted, and remove or hide associated posts from ordinary display. BaySpace may refuse to reassign retired member numbers.

Deletion, wiping, or hiding may not remove:

- backups;
- logs;
- moderation history;
- security records;
- cached systems;
- saved-post records;
- aggregate counters;
- legal-preservation records;
- records needed to prevent abuse or enforce bans.

## 17. No-Email Signup and Account Recovery

BaySpace may allow users to create accounts without email.

This protects user choice and reduces unnecessary identity collection, but it also limits recovery.

If a user creates an account without providing recovery information, the user is responsible for preserving their member number, PIN, recovery phrase, or other login credentials.

BaySpace may be unable to restore account access if credentials are lost. BaySpace may refuse account recovery requests where ownership cannot be reasonably verified.

## 18. Children and Age Restrictions

BaySpace is not intended for anyone under 18.

Do not use BaySpace if you are under 18.

If BaySpace learns that it has collected information from a child under 18 in violation of this policy, BaySpace may delete the account and related information where appropriate.

## 19. Security

BaySpace uses reasonable technical and organizational measures to protect the platform and user information.

These measures may include:

- server-side credential handling;
- salted and hashed PINs;
- protected session tokens;
- secure cookies;
- server-side permission checks;
- database access controls;
- restricted administrative access;
- logging and monitoring;
- moderation tools;
- abuse-prevention systems.

No system is perfectly secure. BaySpace cannot guarantee absolute security, uninterrupted access, error-free operation, or complete protection against unauthorized access.

Users are responsible for keeping their login credentials confidential.

## 20. User Choices and Controls

Depending on available features, users may be able to:

- update profile fields;
- provide or remove optional email information;
- provide or remove birthday month and year;

- add public links;
- choose whether public links display on their profile;
- choose account type during signup;
- choose what to post;
- use anonymous or incognito display modes where available;
- delete posts;
- wipe account posts;
- delete accounts;
- save or unsave posts;
- favorite authors locally in the browser;
- vote on Daily Food posts;
- avoid posting personal information;
- contact BaySpace with privacy questions.

Some choices may be limited by platform integrity, moderation needs, technical constraints, legal obligations, anti-abuse requirements, or available platform features.

## 21. California and Other Privacy Rights

Depending on where a user lives and which laws apply, users may have rights to request access, correction, deletion, or information about how their personal information is used.

BaySpace will review privacy requests according to applicable law, user verification, platform security, and technical feasibility.

Requests may be sent to:

bayoracle@protonmail.com

BaySpace may decline or limit requests where required or permitted by law, including where necessary to protect security, prevent fraud, preserve evidence, complete transactions, maintain moderation records, enforce platform rules, or comply with legal obligations.

## 22. Changes to This Privacy Notice and User Agreement

BaySpace may update this Privacy Notice and User Agreement from time to time.

When changes are made, BaySpace will update the effective date, version number, or both.

Continued use of BaySpace after an updated notice becomes effective means the updated notice applies to continued use of the platform.

Material changes may be announced through the platform where appropriate. BaySpace may require users to accept an updated agreement before continuing to use certain features.

## 23. Contact

Questions, requests, or privacy concerns may be sent to:

[bayoracle@protonmail.com](mailto:bayoracle@protonmail.com)
